### DETAILED ACTION

This office action is in response to application 09/921,604 and amendment filed on 06/17/2003. Claims 2-21 remain pending in the application.

#### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Young et al. (US Patent 6,378,109).

Young teaches method of simulation for gate oxide integrity check on an entire IC to eliminate glitch errors including:

(20) A circuit modification method comprising the steps of:  
determining whether a glitch error is caused in said predetermined wire by an aggressor comprised of one or more other wires (col.9, ll.10-20);  
when determining that a glitch error is caused in said predetermined wire by an aggressor, replacing a driving circuit for driving said predetermined wire with another one having a higher driving ability (by changing wire spacing or inserting buffers/repeaters) than the driving circuit (col.11, ll.57-61).

3. With respect to claims 20 and 21 in terms of integrated circuit design/modification it would have been obvious to a person of ordinary skills in the art at the time the invention was made that replacing a driving circuit with another one having

same functions and a higher driving ability may been achieved, for example, by changing wire spacing or inserting buffers/repeaters.

#### REMARKS

4. Applicant argues: "nothing in Young et al. shows, teaches or suggests replacing a driving circuit with another one having a higher ability...".

But it would have been obvious to a person of ordinary skills in the art at the time the invention was made that replacing a driving circuit with another one having same functions and a higher driving ability may been resolved, for example, by changing wire spacing or inserting buffers/repeaters as discussed above by Young.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office Action. Accordingly, **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

#### ***Allowable Subject Matter***

6. Claims 2-19 are allowed.

**Conclusion**
